

# ÅA-Angels

“The App Every Overly-Attached  
Girlfriend Needs!”

# Problem

- When is the professor in his office?
- How to find your friends in a crowded event like Ruisrock?
- How to find the booth your friend liked at a tech. fair.
- Is my kid/husband really at school/work?

# Solution – FriendFinder

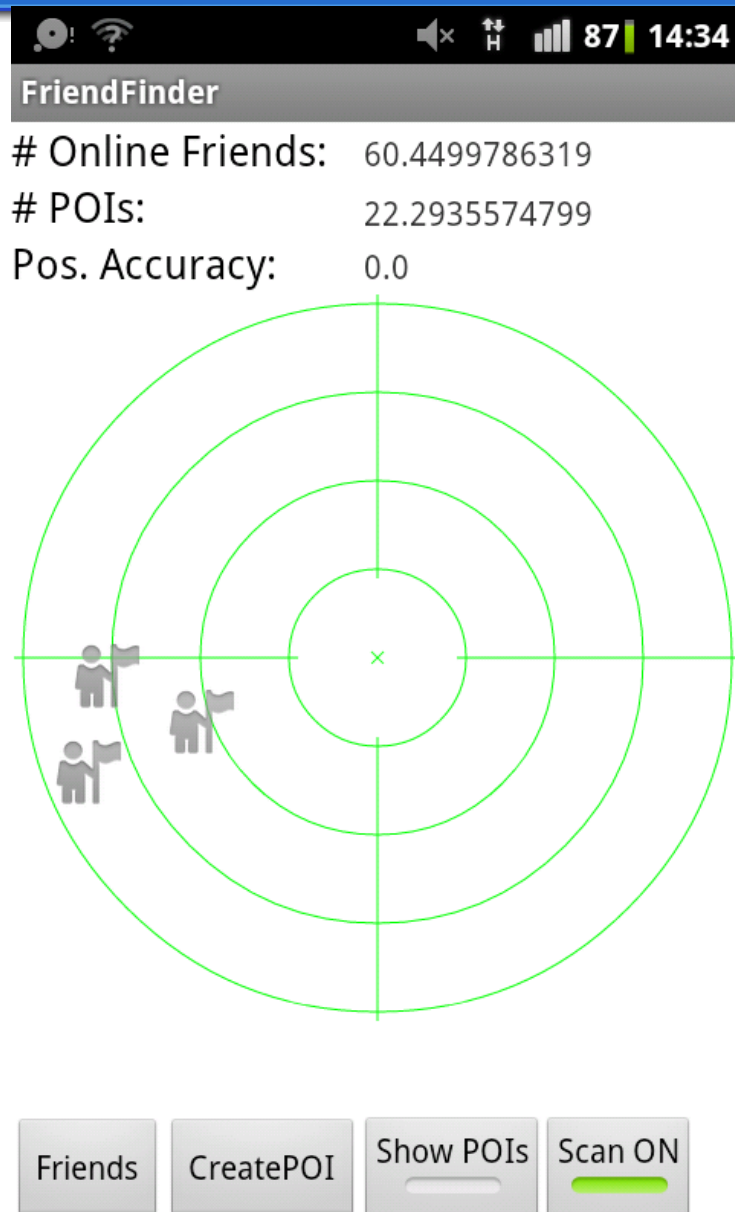

- Real-time social cloud-based -following tool
- Add Points of Interest
- Be notified when your friends comes near your POI
- Military-style RADAR interface for easy visual tracking

# Execution

- Android client
  - Cannot display POI's, or filter friends. Uses dummy data
  - Attributed to Eclipse + newness to Android
- Python server backend
  - JSON input/output + MySQL
  - Server works well, but the client is not quite finished
